

## My thoughts about British Science Week 2021

Hi there, today I will be talking about my experience in British Science Week!

During this week, we have taken part in many Science activities: hovercraft blowing race; experimenting with lamb's hearts; designing coloured milk and using our imagination to create a strong structure.

### Why did we do these experiments?

We did these experiments to test force, to show our bravery and to test our knowledge.

Other subjects did come across in Science Week: art and the word STEM. Stem comes in four words. Science, Technology, Engineering and Maths. (DT)

When I was discovering all these new experiments, I knew that drawing and being artistic with the lamb heart was my favourite. This is because I love art and it was interesting to see an actual lamb's heart in real life.

If I was to pick a Science related job, I would be a vet. I would choose this job because I love animals and if any were in danger I would love to help and look after one.

Every year Science Week has been my favourite and this year was amazing. I did enjoy Science Week and I would love to do another one again!
