

Earth Day

Did you know that a carbon footprint is the total greenhouse gas emissions caused by an individual, event, service, place, or product? It is expressed as a carbon dioxide equivalent?

Our planet is changing rapidly due to the increase in many things: plastic usage and much around the world, so this is changing our planet.

Using and wasting, I am turning the water taps on (while I am brushing my teeth) and that has an impact on the climate, but this is only one thing that has an impact on the climate.

Travelling by different means: car, train and bus, also has an impact on the climate, so to stop that we can walk or go on a bike to reduce the impact on the climate.
