

Earth Day

Carbon footprint means the amount of carbon dioxide released into the atmosphere from individuals and organisations.

The high temperatures that are caused by carbon footprint are melting the ice in cold areas and this is affecting the animals that live in these cold habitats.

There are things that I do that impact on the climate:

- leave the light on
- leave the tap running when I brush my teeth.
-

There are things I can do that will reduce the impact on the climate:

- turn the light off
- turn the tap off, when I brush my teeth.

Olivia Watson
