

Earth Day

Every second on planet Earth, cars are being driven and therefore nasty gas particles are emitted into the air: this is called pollution. Pollution can come in many forms such as smoke and fire, which really impacts on the Earth. This is damaging the o-zone layer and is leading to the world getting hotter and hotter every day. Ice caps are melting due to the increasing climate, leaving us with regular floods and natural disasters. Did you know that there are only 2 ice sheets left in the ENTIRE WORLD? Few ice sheets are left because they are melting from the damaged o-zone layer. We need to save our Earth IMMEDIATELY!

My pledge

In the earth's current state, I feel that everyone should make a pledge to the world. My pledge is that I will discontinue the use of my car when possible because the nasty, gas particles (pollution) are impacting on our environment. I shall also try harder to recycle. This way, we can cut down less trees and decrease the amount of deforestation!
