

## Earth Day

Carbon footprint is the amount of carbon dioxide released into the atmosphere.

The earth's sea is getting polluted from the amount of rubbish and waste being dumped in the oceans. The earth is heating up because we are burning too many fossil fuels.

My actions are having an impact on the environment because I keep leaving the charger on. I use plastic a lot more than I should.

### My Pledge to help the environment

I will turn the charger off when I don't use it.

I will use less paper so that less trees are cut down.

I will cut the hole off can holders because fish get their head stuck.

Dylan Jacques
